

Taipei Veterans General Hospital (TVGH) Department of Pharmacy **Taipei, Taiwan**

Join the Department of Pharmacy at Taipei Veterans General Hospital (VGH) — the only hospital in Taiwan recognized in Newsweek's World's Best Hospitals for both 2024 and 2025. This distinction puts you at the heart of global healthcare excellence, training alongside outstanding professionals in an environment that blends clinical innovation, advanced education, and research. Our international training program, launched in 2010 under the Ministry of Health and Welfare, is now a top choice for pharmacy professionals worldwide. Here, you'll find outstanding opportunities to advance your career and contribute to the future of pharmaceutical care on a global scale.

You'll benefit from rotations across our three specialized divisions: Dispensing, Compounding, and Clinical Pharmacy. Each division is equipped with the latest technology and innovative safety systems that meet international standards for patient care. Since 2021, our collaboration with the Federation of Asian Pharmaceutical Associations has allowed us to mentor over 80 pharmacists from 20 countries, building a strong global network. We have also welcomed students from the United States, Japan, and Malaysia, providing transformative training experiences that prepare future leaders in pharmacy.

Description of Student Rotation Activities

Our results-driven, structured program gives you clear learning goals and measurable outcomes to help you grow as a pharmacy professional. As an integrated team member, you'll join daily clinical ward rounds, counsel patients, and prepare medications under the guidance of expert pharmacists, gaining genuine clinical responsibility and confidence.

Your rotations will cover a range of high-impact specialties, including critical care (ICU and emergency), pharmacist-led cardiology clinics, solid organ transplantation (focusing on medication management), oncology (with hands-on chemotherapy preparation), and traditional medicine services. These experiences offer unique cultural and therapeutic perspectives.

You'll also train with Asia's most advanced pharmacy technologies, including barcode-enabled dispensing, automated compounding systems, and real-time clinical decision support platforms. You'll gain practical skills using AI-powered alert systems that detect and prevent drug interactions and dosing errors before medication reaches the patient. This exposure, combined with evidence-based problem-solving and multidisciplinary case conferences, will help you develop strong clinical documentation and analytical skills—essential for future leaders in healthcare. While Mandarin proficiency is beneficial, our program fully supports English-speaking students, ensuring you're included in every aspect of clinical and technological training.
